

I have personal experience of the importance of Speech-To-Speech in the lives of speech-disabled individuals. Before anyone can USE this service, they have to KNOW about its existence. If there is insufficient money allotted for dissemination of this information, it will remain a secret and will consequently be underutilized. The rights of disabled people, as protected in this instance by Section 225, of the Telecommunications Act, must be protected. Please take action to ensure that phone companies can afford to notify all potenial users of STS.
